

## Hospital and ER Visit Report

This report provides the % change in hospital & ER visits, both due to diabetes and not due to diabetes.

Pt must have had at least one education encounter or one behavioral outcome or one other participant outcome documented during reporting period. If a patient has more than one follow-up documented, but Hospitalizations / ER Visits are only documented for one of the follow ups, then the follow up with the Hospitalizations / ER Visits documented will be used for the calculation. For a patient to be included in the report they must have a hospitalization and ER visit question answered pre education and between 45 and 225 days post education.

If a patient has more than one follow-up documented but Hospitalizations / ER Visits are documented for more than one of the follow ups, then the patient will be included in the calculation for each of the period sub-sections.

### Follow up report inclusion guidelines:

- 3 month follow-up: 45 - 135 days after education completed date
- 6 month follow-up: 136 - 225 days after education completed date
- Any follow up documented with a date that is before 45 days post-education or after 225 days post education will not be included in the calculations
