**Eversense Long-Term CGM: Addressing Traditional CGM Usage Barriers**

*Presented by Ascensia Diabetes Care*

CGM continues to revolutionize diabetes care, but some patients experience barriers to the usage of traditional short-term CGMs. Our multidisciplinary panel of experts and a person living with diabetes will discuss the common issues patients face with traditional CGMs, including disruptions leading to adverse glycemic events, alarm fatigue, compression lows, and many more. They will show how Eversense E3, the only long-term CGM available, helps overcome these challenges and offers patients a truly differentiated CGM experience. You will also learn about the Eversense Roadmap — including the iCGM designation and pending FDA clearance of a CGM system lasting as long as 365 days.

**Revolutionizing Diabetic Eye Screening: Introducing the Optomed Aurora AEYE. Empowering Early Detection with AI.**

*Presented by Optomed USA*

The Optomed Aurora AEYE is a groundbreaking handheld fundus camera combined with advanced artificial intelligence (AI) designed to revolutionize diabetic retinopathy (DR) screening. As the first FDA-approved handheld fundus camera with integrated AI, it offers primary care physicians (PCPs) an effective tool for early detection and management of DR, significantly enhancing patient care.

The device's portability and ease of use make it a versatile addition to any primary care setting. Its handheld design allows for convenient retinal imaging without the need for extensive equipment or specialized training. This seamless integration into existing workflows ensures minimal disruption to routine patient visits while expanding the scope of services offered by PCPs.

The AI-powered AEYE-DS system within the Optomed Aurora analyzes retinal images with remarkable accuracy, boasting a sensitivity of 92-93% and specificity of 89-94%. These metrics indicate the device's ability to correctly identify both positive and negative cases of DR, ensuring reliable screening results. This high level of performance matches or exceeds many tabletop models, positioning the Optomed Aurora AEYE as a preferred choice due to its affordability and portability.

Beyond its technical capabilities, the Optomed Aurora AEYE addresses significant barriers in DR screening—affordability and accessibility. Traditional screening methods often require expensive equipment and specialized personnel, limiting their availability in many primary care settings. In contrast, the Optomed Aurora AEYE offers a cost-effective solution that can be easily deployed, making routine DR screening more accessible to a broader patient population.

The device supports comprehensive patient management by providing detailed reports that can be sent to eye care providers for referrals, stored in electronic medical records (EMR), or shared with patients for educational purposes. This promotes a collaborative approach to patient care, ensuring timely follow-ups and interventions.

The Optomed Aurora AEYE is a transformative tool for primary care practices, combining cutting-edge AI technology with practical design to enhance DR screening, improve patient outcomes, and make high-quality eye care more accessible.
