Creating the Next Chapter in Diabetes Management by Leveraging Interoperability and Dynamic Collaboration - Introducing the *twiist*[™] AID System for Personalized, Flexible Control.

Presented by Sequel

The next chapter in diabetes management is here - introducing the *twiist*[™] Automated Insulin Delivery (AID) System powered by Tidepool. During this panel session moderated by Jenn LeBlanc, you will hear from Sequel colleagues Alan Lotvin and Kate Farnsworth, alongside esteemed endocrinology experts Rayhan Lal and David Ahn. The session starts with a quick trip back to the 1970s when the first wearable insulin pump therapy from Dean Kamen (Sequel Med Tech Co-Founder and President of DEKA Research & Development Corp.) was introduced to the world, paving the way for DEKA's development of a new insulin delivery technology that fundamentally changes the way we think about AID systems. Learn how the *twiist* AID system takes advantage of the FDA's medical device interoperability standards which will help patients personalize their diabetes management to their individual preferences - a result of dynamic collaboration between Sequel and Tidepool driven by a common mission to make life easier for people with diabetes. You'll hear from this panel of experts on how the *twiist* AID system is the first to integrate the Tidepool Loop algorithm, while expanding patient access to consumer-friendly technology and powerful data. Revolutionizing Diabetic Eye Screening: Introducing the Optomed Aurora AEYE. Empowering Early Detection with AI.

Presented by Optomed USA

The Optomed Aurora AEYE is a groundbreaking handheld fundus camera combined with advanced artificial intelligence (AI) designed to revolutionize diabetic retinopathy (DR) screening. As the first FDA-approved handheld fundus camera with integrated AI, it offers primary care physicians (PCPs) an effective tool for early detection and management of DR, significantly enhancing patient care.

The device's portability and ease of use make it a versatile addition to any primary care setting. Its handheld design allows for convenient retinal imaging without the need for extensive equipment or specialized training. This seamless integration into existing workflows ensures minimal disruption to routine patient visits while expanding the scope of services offered by PCPs.

The AI-powered AEYE-DS system within the Optomed Aurora analyzes retinal images with remarkable accuracy, boasting a sensitivity of 92-93% and specificity of 89-94%. These metrics indicate the device's ability to correctly identify both positive and negative cases of DR, ensuring reliable screening results. This high level of performance matches or exceeds many tabletop models, positioning the Optomed Aurora AEYE as a preferred choice due to its affordability and portability.

Beyond its technical capabilities, the Optomed Aurora AEYE addresses significant barriers in DR screening—affordability and accessibility. Traditional screening methods often require expensive equipment and specialized personnel, limiting their availability in many primary care settings. In contrast, the Optomed Aurora AEYE offers a cost-effective solution that can be easily deployed, making routine DR screening more accessible to a broader patient population.

The device supports comprehensive patient management by providing detailed reports that can be sent to eye care providers for referrals, stored in electronic medical records (EMR), or shared with patients for educational purposes. This promotes a collaborative approach to patient care, ensuring timely follow-ups and interventions.

The Optomed Aurora AEYE is a transformative tool for primary care practices, combining cutting-edge AI technology with practical design to enhance DR screening, improve patient outcomes, and make high-quality eye care more accessible.
