

# Automated Insulin Delivery Systems and Insulin Pumps

## Automated Insulin Delivery (AID) Systems

AID systems are the **preferred insulin delivery method** to improve glycemic outcomes and reduce hypoglycemia and disparities in **youth and adults with type 1 diabetes** and other types of insulin-deficient diabetes who are capable of using the device (either by themselves or with a caregiver).

Choice of an AID system or device should be made based on the individual's circumstances, preferences, and needs.

**YOUTH AND ADULTS  
ON MDI\* WITH TYPE 1 DIABETES  
AND OTHERS WITH INSULIN DEFICIENCY**

## Insulin Pumps

**Insulin pump therapy, preferably with CGM<sup>†</sup>, should be offered for diabetes management to youth and adults on MDI\* with type 2 diabetes** who can use the device safely (either by themselves or with a caregiver).

The choice of device should be made based on the individual's circumstances, preferences, and needs.

**YOUTH AND ADULTS  
ON MDI\* WITH  
TYPE 2 DIABETES**

\*MDI, multiple daily injections

<sup>†</sup>CGM, continuous glucose monitoring
