ADA Offers COVID-19 Resources for Professionals

ARLINGTON, Va. (March 19, 2020) – Here at the American Diabetes Association® (ADA), we are dedicated to ensuring that you have the most up-to-date information in diabetes research and care. This is more important than ever during these unprecedented times, as we work together to navigate the COVID-19 pandemic.

To address this need, we are launching two new online professional resources on diabetes and COVID-19 next week. It is our goal that these resources will keep you abreast of the latest developments in epidemiological research, patient education and treatment recommendations.

Diabetes and COVID-19 Online Community:

This new community in our DiabetesPro Member Forum will enable members to share updates and questions related to COVID-19 and diabetes. All professional members will be automatically added to this group, and we encourage everyone to post relevant information. The community will be viewable by the public, however only current ADA members will be able to post content. This community is not an Interest Group—it is a separate community open to all members.

Members will receive a daily email digest from the Diabetes and COVID-19 online community that includes a listing of the latest posts. If you’re a member and you wish to receive emails at a different frequency, you may update them to one of the following options on your Member Forum profile:

- **Real Time:** Receive an email every time someone posts in the community.
- **Daily Digest (default):** Receive a once-daily listing of new posts shared within the past 24 hours
- **Weekly Digest:** Receive a once-weekly listing of new posts shared within the past seven days

Diabetes and COVID-19 Webpage on DiabetesPro:

We are also building a webpage on our DiabetesPro site (professional.diabetes.org/COVID) that will serve as a one-stop shop for professional information on diabetes and COVID-19. This page will include links to timely webinars, panel discussions, new research and Q&As from the Diabetes and COVID-19 online community. Additionally, it will include reference information for patients and updated recommendations from the Centers for Disease Control and Prevention (CDC).

We hope these resources will be valuable to you during these uncertain times. We are here to help and answer any questions you may have. For more information, contact interestgroups@diabetes.org.
